Name: **Crater Creek** Cause: Human

Dry site conditions, active fire spread in a variety of fuel types, lack of natural barriers and rugged local terrain have increased the fire complexity to a Type 3 incident. The fire suppression strategy has been modified from extinguishing the fire, to halting the fire's progression to the east. Fire behavior today was smoldering and creeping with short runs of 5-10 foot flame lengths in dead and down fuels. The fire is currently burning in a large topographic bowl which is creating erratic winds and difficulties for anchoring and safely inserting crews. Minimal water resources on the fire and on site weather today warranted the need for Scoopers 264, 267, T-52, T-55, Air Attack and 35E. A temporary fuel site was established in Venetie and a fuel bladder was set up in Fort Yukon. Venetie is the staging area for the fire. Helicopters 361EH and 508EH are supporting the fire out of Fort Yukon. Of the total five crews assigned to this incident, three were staged off-incident as new strategies and safety considerations are implemented. The Chevak #2 and Arctic Village crews will be transported on 8/8 to the fire.

Assigned Crews:		Assigned:

Several showers from isolated cells, sawyer work, and the Venetie # 2 crew have contributed to the 100% containment of this incident. Mopping up of all visual smokes, continued gridding of the green, and the clearing out of unburned fuels will continue to be operational priorities over the next two burning periods.

Fire personnel on detection ship N114MN reported a 40% active perimeter at 1812. Fire behavior was smoldering and creeping with single tree torching in black spruce and tundra. There our two fingers coming off the west flank of the fire on a flat slope. Winds were out of the east 5 mph with a 80% cloud cover and no precipitation. Four smokejumpers are still engaged in cabin protection and successfully completed a burnout around the cabin during the operations shift.

Fire personnel on detection N309VS ship reported a 22% active perimeter at 1613. Fire behavior was creeping and running with single tree torching. The north end of the fire was showing the most activity with 3-5 foot flame lengths spreading to the north. Some activity was also observed on the east side. Winds were out of the south 10-12 with a 20% cloud cover and no precipitation. On the fire's western edge, 4 smokejumpers continue to secure structures and burnout operations on the southeast side of the cabin. Smokejumpers continue to secure the line around the cabin.

Firefighters continued to monitor containment lines around the fire. Personnel patrolled the Chena River by boat. Areas of concern in the Impact area were patrolled and monitored from the air, and the fire continued a slow eastward advancement in to the Glacier Creek drainage. Initial plans were established for a potential burnout to check the fire's southward progression on the east side of the impact area. Military training exercises on the ground and air were coordinated with incident personnel. A TFR remains in place.

Yesterday, driven by strong southeast winds, the fire made a narrow, 100 acre, one mile-long run to the northwest beginning just east of the existing containment line in Section 24 on Division Z. NIROPS IR detected numerous heat sources along the northern edge and additional acreage gain at the northeastern edge of the fire. In the morning, helicopter buckets were used to check growth on the finger in Section 24. In the afternoon, an attempt was made to walk two dozers in to tie existing line into the old burn in order to prevent additional growth to the west toward Tetlin Corporation lands, the Taylor Highway, and 4 Mile Lake. The dozers were unable to access the ridge and returned to the highway for demob. Delta #2 will be flown in to H-12 tomorrow to begin securing the area. Decrease in estimated acreage due to more accurate mapping.

#401 Owner: STA Admin: FOR-Forestry  
Name: **Moon Lake** Cause: Lightning

Yesterday the fire made a large run to the ridge to the north and west. Cloud cover and elevated humidities dampened fire behavior today, and the fire is smoldering in tundra on the ridge and backing down the slopes to the northeast. In Division T, Delta #2 met containment objectives in the vicinity of H-30. Fire activity along the Tanana River was minimal. In Division W, Yukon continued securing and mopping up the area around H-20 and the slopover in the 2010 Eagle Trail fire scar. Upper Tanana #2 was flown in to Mansfield Village to reinstall structure protection at sites in the Village and around the lake.

Fire personnel on Husky 40HU reported running, single and isolated torching in white spruce, willow, and brush at 1600. The fire was burning on a flat aspect with winds out of the east southeast 10-20 mph 78 degree temp and a 22% RH with no precipitation. The fire was responding to very dry and windy conditions. The perimeter along the western edge was showing the most activity with ground and aerial torching. The eastern perimeter was showing new growth burning adjacent to the old 2010 fire scare. The fire remains in monitor status.

The fire was flown by aircraft 1010F at 1400. Multiple smokes were observed with one smoke in particular on the southwest corner that was putting up a decent smoke column. Fire activity on the southwest was showing active flames, but burning directly into an already critically burnt area. The east side of the fire was backing into the wind which was coming out of the valley and pushing downriver. At 2000 aircraft 1010F flew the fire again and reported that the winds had shifted more towards the south. The fire was no longer backing towards the creek, but more parallel to the creek at that time, and exhibiting some isolated torching. The fire was receiving light precipitation, and is no immediate threat to structures, allotments, or Lime Village. Due to predicted winds, the fire will continue to be monitored through-out the day tomorrow.
