Incident Strategic Alignment Process: Strategic Risk Assessment Terminology & Definitions v6

Critical Values at Risk Assessment

		Severity/Con	sequence	s if Fire Ir	npact Occurs			
Catastrophic		Critical		Moderate		Negligible		
Value is destroyed or		Value is destroyed or		Some portion is unusable or		Minor damage or only		
unusable for months, will		unusable or restricted for		restricted but can be restored		temporarily unavailable or		
permanently affect the		weeks, impact can be repaired		within an acceptable		restricted, little to no action		
natural environment		with appropriate resources,		timeframe, short-term impact		nee	needed for mitigations post	
(irreversible), threat to		threat to damage of fauna,		that is able to be addressed		event, insignificant impact to		
survival of fauna, flora,		flora, cultural, heritage		through existing processes,			cultural/heritage resources,	
cultural, heritage				impairment of fauna, flora,		potentially beneficial		
				cultural, heritage		response from fauna/flora		
		<u>Probability</u> /Lil	kelihood (of Fire Im	pacting Values			
Almost Certain		Likely	Poss	sible	Unlikely		Rare	
Expected to occur, or is	Will	occur frequently,	Could occ	cur under	Remotely possible	e but	Improbable, but has	
happening now very		y realistic to occur specific co		nditions & not probable, co		uld	occurred in the past	
			some of those		occur but deemed			
			conditions a	re currently	unfeasible			
			evide	enced				
		Respor	nder Ris	k Asses	sment			
					shap Occurs			
Catastrophic		Critical		Moderate		Negligible		
Imminent & immediate		Permanent partial disability,		Hospitalized minor injury,		First aid or minor medical		
danger of death or permanent		temporary total disability		reversible illness		treatment		
disability, major dama			•					
	Prol	bability/Likelih	nood of a	Mishap if	Hazard is Pres	sent		
Almost Certain		Likely	Poss	sible	Unlikely		Rare

Pillars of Incident Strategic Alignment Process:

- 1. Critical Values at Risk: Why are doing the work?
- 2. Incident Strategy and Strategic Action Subcomponents: What are we doing?
- 3. Responder Risk: What does it mean for the safety and welfare of the people doing the work?
- 4. **Probability of Success**: Can we protect the values as planned safely?

Responder Risk Categories Described:

- Ground Transportation: ALL ground movement to/from & at the work area: Driving (engines, heavy equipment, rentals, operational & support functions, etc.), UTV/ATV, hiking, pack strings, boats, etc.
- Rapid Fire Growth: Think Entrapment: escape routes/safety zones, disengagement points, fuel conditions & indices, event predictability, etc.
- Hit-By Hazards: Gravity Hazards: Snags, green trees, rolling rocks, topography, etc.
- <u>Aviation Operations:</u> All aviation use (manned/unmanned): Logistical support, operational tasks scooping/dipping, water sources, UAS, etc.
- Human Factors: All things human-related: internal/external pressures real or perceived, communication, leadership, social-political, etc.
- <u>Medical Response & Capability:</u> How resilient is our system to support from a medical standpoint NOT how severe of an injury!
