

Coffee Brief

Date: July 28, 2019

Weather Summary

A mildly unstable airmass is in place over Alaska's Interior allowing scattered showers and isolated thunderstorms this weekend. The atmosphere is moderately moist, so these thunderstorms should be wet. The pressure pattern over mainland Alaska is quite flat. Without the presence of strong high and low pressure systems, winds over the Interior will be light and variable for the next couple of days.

In the longer term, a low pressure system now in the Russian Far East will move eastward across Alaska's North Slope by the middle of next week. The low pressure system will be too far north to tap into the ample moisture available in the Bering Sea, so widespread wetting rains are not expected. Rather, scattered showers and isolated thunderstorms are possible, especially over the North Slope and the northern Interior.

Then by next weekend, it is possible that high pressure will build over Alaska in the wake of the Russian low's departure from the Alaska region, bringing a chance for increasing sunshine and warmer temperatures to Alaska.

Preparedness Levels & Alaska Fire Activity

Alaska	4
National	2

Light Initial Attack Activity
New Fires and Acres: **1** Fires for **0.1** acre

Alaska Fuel Status [Alaska Fire and Fuels Map](#)

A Fuels and Fire Behavior Advisory has been issued for Alaska.

Fuels/Fire Potential

FFMCs continue to moderate across the state. Ignition potential continues to remain high in the Yukon Flats and any areas that did not receive rain.

Outside of the Upper Yukon Valley, the contrast between DMC and DC is significant as values of DMC have fallen somewhat while values of DC have remained very high. Mop up is still difficult and time consuming.

The Spruce Adjective Rating is low across most of the state. Potential is still highest in the Yukon Flats. SAR will begin to rebound when the moisture stops.
