Coffee Brief

Date: July 2, 2022

Preparedness Levels & Alaska Fire Activity

- **Alaska**: 5
- **National**: 2

There are currently 14 staffed fires not part of complexes, and 4 staffed complexes. Yesterday’s large fire growth was ~236,610 acres.

AVIATION

TFR on fire #427 South Fork (DAS)

FDC 2/7307 ZAN AK..AIRSPACE 10NM NE DELTA, AK..TEMPORARY FLIGHT RESTRICTIONS WI AN AREA DEFINED AS 5NM RADIUS OF 641100N1452200W (BIG018014.2) SFC-7000FT TO PROVIDE A SAFE ENVIRONMENT FOR FIRE FIGHTING ACFT OPS. PURSUANT TO 14 CFR SECTION 91.137(A)(2) TEMPORARY FLIGHT RESTRICTIONS ARE IN EFFECT. NORTHERN FORESTRY DISPATCH CENTER TEL 907-451-2680 OR FREQ 120.750/SOUTH FORK FIRE IS IN CHARGE OF THE OPS. ANCHORAGE /ZAN/ ARTCC TEL 907-269-1103 IS THE FAA CDN FACILITY. 2207030430-2207230700

1EB took a rock to the prop – out of service until further notice
T-562 arriving today
T-52 out of service
T-540 for State protection only

SMOKEJUMPERS

Anticipated smokejumpers available: 19
~ 117 SMKJ’s committed + 3 as single resources (2 boat operators and 1 ICT3 trainee)

*#346(FAS): AA-1MZ, ASM-B4
*#225(TAD): 1 load SMKJ, couldn't find cabin came home diverted to #296(FAS) where they kicked 12 SMKJs out the door
*#429(TAS): requested 2 loads SMKJ and A/A, sent AA-0AX.
Smokejumper Demobilizations

Yesterday: #352 (8), #349 (4); #408 (8); Bean Complex (~10); and #369 (4)
Planned for today: #294 (4) and #395 (8) into Fort Yukon

CREWS
There will be a lot of crew movement today as the latest jet load gets into position

Jet #6 Allocations
- Tallac IHC - Clear
- Lassen IHC – Poorman Complex
- Mendocino IHC - Goose
- Plumas IHC - Clear

OVERHEAD/TEAMS
- 87 pending overhead requests

NICC JET MOVEMENT

7/3 - No Jet Movement

7/4 - Jet #7
- Arroyo Grande IHC
- Texas Canyon IHC
- Crane Valley IHC
- Fulton IHC

7/5 - Jet #1 - Demob of Jet #1 out of FBK
- Union IHC
- ZigZag IHC
- Entiat IHC
- Winema IHC
- Rogue River

*Last work day for these crews = 7/3, travel to Fairbanks on 7/4, fly out on the Jet 7/5

7/8 - Jet #2 - Demob of Jet #2 out of FBK
- Redmond IHC
- Prineville IHC
- La Grande IHC
- Vale IHC

* Last work day = 7/6, travel to Fairbanks 7/7, fly out on the Jet 7/8
Weather Summary
High pressure aloft is centered along the Al-Can border and is providing very warm temperatures to mainland Alaska. Humidity is low but not terribly so.

Thunderstorms today through Monday will mainly develop in the central and eastern Interior, and there will likely be several thousand strikes today and Monday, with a good chance of starting new fires due to the dryness of the fuels and the limited potential for these thunderstorms to produce wetting rains. Temperatures will also be very warm for the Interior through the holiday weekend, with widespread upper 70s and 80s.

Next week, low pressure may move into western Alaska from the Bering Sea. Such a development would bring wetter and cooler conditions to the western part of the state, but would leave much of the Interior and the Panhandle with continued warm and mainly dry conditions.

Fuels/Fire Potential
Surface fuels continue to respond to the warmer and drier weather. FFMC values are highest across the eastern Interior and holding relatively steady in the Mat-Su and on the Kenai Peninsula. Expect FFMCs to remain elevated across much of the state in the coming days. Southwest Alaska is still experiencing growth on existing fires due to dryness of live fuels, which is not captured in FFMC. There will be continued large fire growth in areas with good ventilation. Fire growth can either be fuels or wind driven. Increased smoke production may limit fire spread.

Subsurface drying is the main driver of fire spread. The Duff Moisture Code (DMC), which is the main component of the Buildup Index (BUI) this time of year, is at extremely dry levels across areas of the Interior, Southwest and South Central. The footprint of extreme values is increasing daily given current weather. The dry duff layers increase fireline intensity and resistance to control, requiring more time and effort to manage. As the drying continues, the increasing resistance to control will slowly begin to increase the resistance to extinguishment as deeper fuels dry. South Central currently does not have large fires, but fuels are conducive to support spruce-driven fire spread with any new ignitions.

BUIs are increasing across greater areas of Alaska and continue to support large fire growth across the state.

When encountering a mismatch between a point value based on actual weather observations and the background grid, please discount the grid and go with the points.

Fuels Status Alaska Fire and Fuels Map

An Updated Fuels and Fire Behavior Advisory was Issued Yesterday
**Fuels and Fire Behavior Advisory**

**Interior, Southwest, and South-Central Alaska**

**Valid: June 25 – July 8, 2022**

**Subject:** Exceptional landscape flammability and widespread ongoing large fire growth.

**Discussion:** The Buildup Index (BUI) is the best indicator of seasonal severity and overall flammability of fuels in Alaska. It represents deeper drying in the duff layers and greater fuel availability. Large fire growth occurs from mid-June to mid-July surrounding the summer solstice when long days and rapid drying can produce elevated BUIs. Southwest Alaska normally experiences shorter periods of high flammability but has had numerous fires burning since the end of May. By mid-June fire activity began to spread eastward in the Interior. Numerous fires are now burning in the central Interior. The area of activity is expected to expand eastward into the Yukon Flats. South Central has been burning rapidly and BUIs are now at record levels.

**Difference from normal conditions:** The attached graph shows the current 2022 BUI trend for the Interior of Alaska compared to other busy fire seasons. 2022 has been above average BUI since May 31, and higher than 2019 levels for the same period. Convective precipitation has moderated values in some areas but forecast high pressure will rapidly increase values. Much of the landscape has experienced large fire growth earlier than usual. Multiple days of wetting rain adding up to more than one inch will be needed for lasting relief.

![Graph showing BUI trends](image)

**Concerns to Firefighters and the Public:**

- Spruce stands are extremely flammable, will ignite readily, exhibit rates of spread more than one mile per hour, torch, and spot prolifically up to 1/4 mile or more, and exhibit intense crown fire behavior.
- Temperatures above 80 degrees and RH below 30% are important thresholds for rapid spread and crown fire behavior. Strong winds are not required for large fire growth.
- Long-term drying has stressed green fuels and is encouraging spread into riparian areas and less flammable hardwood forests. These fuel types may no longer be barriers to fire spread.

**Mitigation Measures:**

- Ensure that you can recognize hazardous fuel types including tundra that is exceptionally dry.
- Understand the triggers and thresholds for problem fire behavior.
- Monitor forecasts and indices to anticipate areas of increased flammability and extreme fire behavior.
- Maintain clear communications when working around active fires.

**Area of Concern:** Interior, Southwest and South Central Alaska
