INCIDENT MANAGEMENT SITUATION REPORT
 TUESDAY, AUGUST 1, 1995 - 0530 MDT
 NATIONAL PREPAREDNESS LEVEL III

*** THE TEN STANDARD FIRE ORDERS ARE FIRM. ***
 *** WE DON'T BREAK THEM; WE DON'T BEND THEM. ***

Current Situation: Fire activity remained constant in most areas of the West. Thunderstorm activity continued to affect fire behavior and provide new starts in the Southwest. Very high to extreme fire indices prevail in the Southwest, Rocky Mountain, Great Basin and California. Mobilization of resources through NICC continued at a moderate pace.

Southwest Area Large Fires:

SHOVEL, Coronado NF. The fire continues to threaten several communication towers and facilities, a DOD radar station and University of Arizona Astro-Physical site. The west flank is under confine strategy due to safety concerns.

HB, Gila NF. A Type II Incident Management Team (Lee) is committed. Torching and spotting across control lines continue to cause containment problems. A burnout operation accounts for the acreage increase. Resource rotation from base to spike camps has presented logistical problems.

BEAR JAW, Coconino NF. A Type II Incident Management Team (Bedlion) is committed. Considerable progress was made with cooler temperatures and higher humidities. Threats to watershed and Mexican Owl habitat have diminished.

Rocky Mountain Area Large Fires:

TRIANGLE, Moab District, BLM. A Type I Incident Management Team (Birch) is committed. This fire is being managed in the Rocky Mountain Area by Grand Junction District BLM. The fire grew significantly to the southeast into Spring Canyon. A closure order and evacuation are in effect for the Spring Canyon area. Concerns are for the public, structure protection, and to maintain firefighter safety. Ranches, primary residences, and summer homes are threatened. Assistance is being provided by Red Cross and a local HAM radio operator club.

MITCHELL, Grand Junction District, BLM. A Type II Incident Management Team (Watters) is committed.

Outlook: High pressure over the Four Corners area will continue to move moisture and afternoon thunderstorms into the Southwest. The northern half of the western U.S. will have stable conditions and provide clear to partly cloudy skies. The exception is in the northern mountains of Montana, where a low pressure impulse may kick off afternoon thunderstorms. Initial attack and large fire activity is expected to persist in the Southwest due to continuing thunderstorm activity. Holdover fires from previous lightning storms are a concern for the remainder of the West.
