INCIDENT MANAGEMENT SITUATION REPORT  
 WEDNESDAY, AUGUST 2, 1995 - 0530 MDT  
 NATIONAL PREPAREDNESS LEVEL III

\*\*\* ALL FIREFIGHTERS HAVE THE RIGHT TO A SAFE ASSIGNMENT \*\*\*

**Current Situation:** Fire activity remained constant in most areas of the West. Thunderstorm activity was again concentrated mainly in the Southwest area, increasing fire behavior and providing new starts. New large fire activity was reported in California and the Southwest areas. Very high to extreme fire indices prevail in the Southwest, Rocky Mountain, Great Basin and California. Resource mobilization through NICC remained at a moderate level. Four Type I helicopters, a caterer and shower unit were mobilized for the Pony fire. A Type II helicopter, caterer and shower were also mobilized to the Covington fire.

**Southwest Area Large Fires:**

**DOVEL/GREEN COMPLEX, Coronado NF.** A Type II Incident Management Team (Boore) is committed. The current strategy is to tie the firelines together on the east flank and to burnout. The fire continues to threaten several communication towers and facilities, a DOD radar station and University of Arizona Astro-Physical site.

**LT, Prescott NF.** The fire is threatening an electronic communications site.

**Lee, Gila NF.** A Type II Incident Management Team (Lee) is committed. Spotting across the fireline continued, however all spots were contained.

**EAR JAW, Coconino NF.** A Type II Incident Management Team (Bedlion) is committed. Good progress was made although warmer and drier conditions increased fire activity yesterday. Heavy fuels and a lack of additional moisture will lengthen mop-up operations.

**outlook:** A FIRE WEATHER WATCH IS POSTED FOR THIS AFTERNOON AND EARLY EVENING IN WYOMING FOR HIGH TEMPERATURES AND LIGHTNING ACTIVITY.

Afternoon thunderstorm activity will be common across the entire West, except for Washington. A high pressure system will continue to pump moisture out of the Four Corners region. High temperatures over the interior West will be in the 90's. East of the Washington Cascades and along the Pacific coast highs will be in the 60's and 70's. The southern deserts of California, Nevada and New Mexico will have highs from 100 to 120 degrees. Initial attack and large fire activity is expected to continue as thunderstorm activity persists.
