Narrative: The digitized fire perimeter was updated based on last evenings surveillance flight mapping. The calculated acreage at the time of mapping was 85,845.8 acres. At 1847 a zone surveillance flight reported the fire as 50% active. Over the fire, winds were south creating isolated torching on the northern perimeter and creeping and backing conditions on the remaining perimeter. The fire was burning in primarily black spruce, tussoks and various hardwoods. The terrain is flat and was described as rolling on the southern perimeter. Surveillance is monitoring a structure in the area that is separated from a threat due to a safe and significant distance of marshy fuels.
