 # 898 Name: **Railbelt Complex** Cause: **Lightning** Admin: **FOR**

Narrative: Areas of persistent heat in deeper duff layers continued to smolder in all fuel types. Right now the threat level is low and a large increase in fire perimeter is unlikely due to the precipitation received. If a warm dry weather pattern returns, increases are possible due to the large areas of uncontained perimeter.

[Railbelt Compl](#) Narrative: Crews made good progress mopping up western flank. The fire perimeter on the Tanana flats exhibited numerous smokes. Southern flank in the north end of the Alaska Range showed no critical smokes on the perimeter. Little potential threat to values-at-risk or an increase in fire perimeter due to precipitation. Areas of persistent heat in deeper duff layers continued to smolder in all fuel types. Future concerns may arise with dry, warm weather and large areas of uncontained perimeter.
