Narrative: The western flank remains the major problem for containment. Steep and varied terrain, meandering perimeter, heavy fuels and the majority of remaining heat is taking extensive crew work. Minimal fire behavior was observed during today's shift. Heavy down fuels continue to burn along the uncontained fire edge, and with drying could pose control problems. Smokejumpers jumped into remote portions on the northern flank of the fire to build 2 new helispots for insertion of crews and their logistical support. Crews made good progress coldtrailing and building fire line on both the northern and western perimeters. The fire is approximately 51% contained.
