At 1737 the fire was discovered by a commercial aircraft pilot. The fire was approximately 1 acre in size and smoldering in spruce in a full suppression management area. It was determined that action needed to be taken and one load of smokejumpers was ordered.

At 1840 smokejumper aircraft Jump-09 responded to the area and delivered 8 smokejumpers to the fire. The fire had begun to burn into willow brush and dead and down fuels. No further resources were requested.

At 2240 IC Dibert called in and reported that they’d gotten around most of the 1-1.5 acre fire. The fire was burning in tall spruce and they hadn’t found the point of origin. They estimate one day of mop-up, one day of monitor, and a possible re-supply, as one cubie exploded.

This fire was reported by personnel on fire 240. Air attack, smokejumpers, and tankers were requested. When air attack arrived on scene the fire was 40 acres, 100 percent active, running and torching in black spruce and tundra. It plotted on State land in a limited management protection option area, but was within .5 miles of full and modified and 2 miles from structures. Three loads of smokejumpers, a heavy airtanker, three CL-215’s and a Division of Forestry helicopter with a module responded to the fire. By the end of shift the fire had grown to 100 acres and was 80 percent active. The tankers were utilized to anchor the tail of the fire and slow the fire’s spread. The firefighters received a load of supplies via paracargo and were working to set up hose-lays to wet-line the left flank.

Air Attack N688TM reported this fire as ninety percent active in a predominately alpine brush fuel type with some thin black spruce. The fire was creeping with occasional running.

At 1330 the fire was discovered by zone surveillance in aircraft N9011N. The fire was approximately 20 acres in size but there was no fire activity observed. The fire plotted in a limited suppression management area and was placed in monitor status.

Zone surveillance in N309VS discovered this 15 acre black spot. The area was located primarily in tundra with some black spruce. There was no smoke or activity on the fire under sunny skies. The fire plotted in a limited management option area and was placed in monitor status.
The fire was discovered last night (6/13) by Alaska State Troopers who reported it to Fairbanks Area Forestry. At 0812 (6/14) the report was relayed to UYT Dispatch. At 0835 an additional report was received from a private citizen who reported the fire to be approximately 2 miles south of the east end of the runway at Squaw Lake. The fire was reported to be 3 acres in size and growing. At 1225 the fire was flown by zone surveillance aircraft N9011N. Under 30% cloud cover the fire was 50% active at 5 acres in size. The fire was creeping downhill to the east in tundra on the upper 1/3 of the slope. The fire was burning on a northwest aspect and the coordinates were updated. The fire plotted in a limited suppression management area and was placed in monitor status.

Assigned Crews:
- Allakaket #1  Type 2  Assigned: 6/5
- Diamond Mt. IHC  Type 1  Assigned: 6/10
- Noorvik #1  T2  Assigned: 6/3

Fire spread was limited to smoldering and creeping. Aviation resources were able to resume operations and redistribute resources. Ground resources continued mopping-up previous burn-out operations and three boats continued prepping structures north of the fire area. Transition from a Type 3 IC to a Type 4 IC has been completed.

Surveillance flight N309VS flew this fire and reported that there was no activity, no smoke, and no precipitation.

Creeping and smoldering fire behavior was observed. Crews have completed mop-up 300 feet in from the line and the entire length of the 13 mile-long line south of the Elliot Highway was secured to 150 feet inside the line. Helicopter N57954 conducted an IR surveillance flight with nothing significant to report. Began pulling hose and pumps. Preparations are being made for completion of demobilization on 6/15. The fire will be monitored on a regular basis.
Fire activity was observed as creeping and smoldering. Two type one crews and miscellaneous
overhead were demobilized. Transition to a new incident commander (Olson) occurred at 0700 on
6/13. Patrols will continue along with downsizing of Manley Staging.

Assigned Crews:
- Tanana #1
- Assigned: 5/31

Narrative:
The daily work continued; gridding, patrolling, and mopping-up 100’ in along the entire perimeter.
The fire is 80% contained.

Assigned Crews:
- Koyukuk T2
- Assigned: 6/12
- Mat-Su T2
- Assigned: 6/12

Incident transferred from a type 2 command team to a type 3. Crews supported by heavy equipment
and helicopters worked to complete containment lines and mop-up along existing lines. The
rehabilitation of sensitive areas is on going. Although several days of precipitation have reduced
current threats, the long term goal is still complete containment and extinguishment. The fire is 90%
contained.

- Kaltag #2 T2
- 6/2
Sunny warm conditions over the Upper Tanana Valley brought low RH's, higher temperatures and high winds. The high winds have created a problem with falling trees along the line, this has impacted fire crew safety and work load for saw teams. This drier weather allowed crews to find smaller sources of heat smoldering deep in the duff. Crews continue to demobilize. Fire suppression repair work continues on parts of the fire south of the Alaska hwy.

**Assigned Crews:**
- Yukon T2IA: Assigned: 5/27
- Jackson IHC T1: 6/3
- Pioneer Peak T1: 6/7
- Gannett Glacier T2IA: 6/12

**Narrative:**
Resources continued falling and mitigating tree hazards as well as mopping up the interior of the fire. The ownership has changed for this fire.

**Assigned Crews:**
- White Mountain T2IA: Assigned: 6/8

**Narrative:**
On 6/9 Donnelly Training Area range personnel reported no visible smoke on the BAX range. The burn remains in monitor status.

**Narrative:**
Air Attack N688TM flew the fire and reported no smoke or activity on the fire.

**Narrative:**
The most recent observations were made on 6/12 and the fire remains in monitor status.
