#275	Name: Dry Creek		Cause: Lightning	Admin:

Narrative: Personnel were unable to observe the fire due to a low ceiling. The fire received precipitation today and the indices were dropping. The fire was last flown on 8/25/12 at 1400 by personnel in zone helicopter N6015S. Under 80% cloud cover and light precipitation the perimeter was 30% active in all fuel types. The west flank and north end were the most active with fire smoldering in shrub tundra with isolated group torching in black spruce. The interior continues to burn out on the northern half in tundra, jackpots of spruce and mixed hardwoods. Winds were light out of the southwest with smoke drifting along the surface to the North/Northeast. No significant growth was observed. The fire will remain in monitor status.
