Twelve jumpers today continued line and helispot construction in preparation for the arrival of their requested resources. Chena IHC was released from Fire 280 and transported to the incident via fixed wing and rotor shuttles. Late in the day the Koyuk T-2 Crew was also mobed to the incident. Scoopers 264 and 267, along with air attack were valuable tactical tools throughout the day as water availability is scarce. The fire continues to gain acreage burning in grass, brush and tundra of the 2004 Pingo burn. Moving 2-3 additional crews to the fire and a remote refueling site to Venetie will be the logistical priorities for 8/6.

The fire area was flown 8/5 by N309VS. Under 90% cloud cover, 2% of the perimeter was active exhibiting smoldering and creeeping behavior, with 1-2 foot flame lengths. All observed fire activity was noted in the north, with some associated spread to the north and east. Smokejumpers continue to prep and secure a federal cabin which was recently threatened by increased local fire activity. Light showers in the area yesterday postponed options to burn out around the structure.

The northern edge of the fire made another run today, this time to the northwest. Group torching with column development and 3-400 foot spotting was observed. In Division T, Arctic Village and Delta #2 made good progress mopping up 300 feet in east from H-30 and developed a medevac site in their work area. Most of the Yukon crew made good progress falling hazard trees and mopping up a 5 acre pocket of heat along the Tanana River near Cathedral Rapids. In Division W, Upper Tanana #2 continued securing and mopping up the slopover in the 2010 Eagle Trail fire scar. A squad from Yukon worked an area of line in the vicinity of H-20. Bucket helicopters were used to cool the northern edge of the fire and reduce the likelihood of additional growth. A squad from Yukon was used late in the afternoon to assist Tok Area with an IA at the Tanacross landfill. Helicopter 214TH went out of service this afternoon with mechanical issues. It is unclear how long before it becomes available again.

Heavy clouds were present over the entire fire during the NIROPS infrared heat detection mission. No portions of the perimeter could be analyzed. Aerial reconnaissance in 78C verified that activity on the eastern portion of the fire increased throughout the day and developed an organized flame front with column development and acreage gain on State lands to the northeast across the Ladue River and on to the slope in Sections 26, 22 and 23. The fire continues to smolder on the north central and south central portions of the fire, but poses no threat to containment.
