#661 Owner: NCA Admin: Venetie
Name: **Crater Creek** Cause: Human

Dry site conditions, active fire spread in a variety of fuel types, lack or natural barriers and rugged local terrain have increased the fire complexity to a Type 3 incident. The fire suppression strategy has been modified from extinguishing the fire-- to halting the fire's progression to the east. Fire behavior today was smoldering, creeping and short runs with 5-10 foot flame lengths in dead and down fuels. The fire is currently burning in large topographic bowl which is creating squirrely winds and affords negligible features for anchoring and safely inserting crews. Minimal water resources on the fire and on site weather today warranted the need for Scoopers 264, 267, T-52, T-55, Air Attack and 35E. Limited local refueling capabilities for essential air supporting resources has mandated the establishment of a temporary fueling site in Venetie and the enhancement of refueling capabilities at Fort Yukon. Helicopters 361EH and 508EH are supporting the fire out of Fort Yukon. Venetie staging is concurrently being set-up. Of the total 5 crews assigned to this incident, three were staged off-incident as new strategies and safety considerations are implemented.

Several showers from isolated cells and the hard work of sawyers and the Venetie # 2 crew have contributed to the 100% containment of this incident, as of today. Per the I.C. "This fire is looking good!". Mopping up of all visual smokes, continued gridding of the green and the clearing out of unburned fuels will continue to be operational priorities over the next 2 burning periods.

 Name: **Toklat River East** Cause: Lightning

The fire was flown 8/6 by NPS H-58191. Under 90% cloud cover - 30% of the perimeter was active exhibiting smoldering, creeping, backing and isolated torching. 1-3 foot flame lengths were observed. With south winds estimated at 15mph - all current fire activity was noted in the northern portions of the fire. To the north and NE, the fire was burning slowly through the old 2011 fire scar. On the fire's western edge, 4 smokejumpers continue to secure structures and prep fuels for possible burn-out operations, as warranted. Chinook wind conditions have contributed to fire behavior and falling trees.

The northern edge of the fire made a large run to the north and northwest, pushed by wind and topography. Active crown fire and spotting was observed. A large terrain-driven convection column developed in the early afternoon and built until the evening. In Division T, Delta #2 continued to make good progress mopping up 300 feet in east from H-30 with the support of helicopter bucket work. Buckets were also used to cool an area of heat along the Tanana with some potential to spot across the river. In Division W, Yukon continued securing and mopping up the area around H-20 and the slopover in the 2010 Eagle Trail fire scar. An information officer visited the community of Tanacross and was able to answer questions and provide current information. Upper Tanana #2 and the Forest Service R10 crew worked for Tok Area on fire 666 and initial attack.

NIROPS Infrared detected significant heat and perimeter growth on the eastern edge of the fire this morning. MODIS confirmed the activity and showed additional growth to the northeast in the afternoon. A well-developed column was visible from Tok, and from the Taylor and Alaska Highways. An information officer hiked in to the Bible camp at 4 Mile Lake on the Taylor Highway and was able to answer questions and provide current information. There is no threat to the camp or other values at this time.
