Fire personnel in detection ship N309VS reported a 3 acre fire creeping, backing and running in tundra and moving into black spruce at 1715. The fire perimeter was a 100% active with winds out of the east. The fire is on a south aspect, mid slope, with 10% cloud cover. The fire plots in Limited and was placed in monitor status.

Firefighters will continue to construct and hold line. The fire is in a big bowl with steep terrain causing erratic winds. The steep terrain and dry fuels are dictating the use of suppression crews at this time. The fire is very reliant on helicopters for supplies and potential emergency medivacs, and to maintaining field resources. Today Div Y was mopped up and gridded 300' from H-10 to H-30, Div A was mopped up to 300' from the perimeter below H30 and some interior smokes were extinguished. No smokes were showing in Div Z. Difficult steep terrain will continue to be a safety concern for the type 2 crews. Bears have become a nuisance around camp and on the fireline. This fire is staffed with 98 persons.

Name: **Birch Creek** Cause: Lightning

The observed fire behavior was creeping and smoldering with a moderate rate of spread in the black spruce. Multiple structures and the community of Circle Hot Springs are threatened by the fire. The weather is unseasonably warm and dry with high winds. Also, the fuels are abnormally dry. Today fire personnel constructed indirect line for protection of Circle Hot Springs. Critical needs for this fire include 1 Type 3 helicopter (PSD qualified) for Medivacs and anticipated PSD operations, an IHC, or 14 smokejumpers to assist with firing operations. Critical resource needs are based on anticipated burnout operation which is critical to meeting management objectives. Hot, dry conditions and numerous structures threatened. There was minimal fire growth to the southeast today; fire will be GPS'd and have a better acreage update for tomorrow. This fire is staffed with 192 people, that includes 6 type 2 crews, a strike team of engines and several overhead.

Name: **Joint Lake** Cause: Lightning

Today's observed fire behavior was creeping, ground fire and torching. The fuels are timber (grass and understory) white spruce and tundra. The crews worked on sawline construction and continued the hoselay from where the jumpers left off a couple of days ago. The fire is very reliant on helicopters for supplies and potential emergency medivacs and critical to maintaining field resources. There are 43 persons staffing this fire.

(Crews on this fire may be named on the Crater Lake Incident.)

#280 Owner: MIL Admin: ARMY-U.S. Army
Name: **Stuart Creek 2** Cause: Human

Higher humidity values, calm winds, and an inversion layer kept fire activity moderate, however extremely dry fuels continued to support fire. Division M received an additional handcrew, and mopped up hotspots along the fire edge. Division C patrolled Quarry and Brigadier Roads, and monitored fire progression in the Stuart Creek drainage, where the fire continues to approach Glacier Creek, an identified trigger point for potential aerial firing off of South Camera Road. Engines monitored site protection and continued water shuttling to support hydraulics protecting military assets. Widespread fire activity within un-burned islands, some of which are near containment lines, remain a concern. On 8/14, a crew will be inserted in to H-14 in Division R to secure perimeter and mop-up an area of concern near the helispot. Hardwoods continue to exhibit 1`-3` flame lengths with continuous active flame fronts in the leaf litter, and re-burn in previously burned areas has been observed regularly, consuming the entire tundra mat. Aerial observation and timely IR data remains essential in identifying threats to containment. Various military sites in and around the Impact Area remain threatened, and the military will remove some values in Division B on 8/14. A TFR remains in place.

The fire has escaped the military restricted area and is burning on State Full Protection Land. Fire has moved out of old growth timber and into tundra, spruce, and hardwood mix. Much of the perimeter remains sheltered in both hardwoods and spruce understory. Continued growth is expected as long as weather remains hot, dry and windy. Occasional backing was exhibited along the southwestern and western perimeters with an increase in wind velocity after the inversion lifted. Smoke is having an impact on community and aviation resources and access to homes/residences. State timber units threatened along eastern edge of fire area. Areas of burned timber are falling into jack-strawed remnants. There continues to be potential for crossing the Tanana and/or Delta Rivers, primarily on the north end of the fire. Little organized movement occurred as fire remained under inversion until 1300 hrs today. US Air Force "Red Flag" Exercise is continuing flight operations. This fire is staffed with 347 persons.

The fire personnel continued to prep structures for point protection; a recon of the fire was done by the FMO and IC. The fire had short ground runs and isolated group torching. During the next operational period, personnel will continue to shuttle supplies and identify other resources to protect. Homeowners continue to call with concerns of the fire area and their properties. IC + 43

Crews finished mopping up areas of concern on the eastern flank of the fire and containment objectives for the all divisions have been met. Gannett Glacier was repositioned to the Tetlin Junction Ridge Fire to help secure areas of concern. Resources remain in place at Mansfield Lake Village. All other resources were pulled off the fireline and the fire is now unstaffed and will be monitored daily by air. The fire along the northern perimeter continues to back down the ridge west of H-18 with 2ft flames and single tree torching.

(Crews listed here are currently staffing Tetlin Ridge)

 Name: **Sandless Lake** Cause: Lightning

The fire was observed on 08/13/2013 by N309VS at 1540. Fire behavior was reported at a 20% active perimeter creeping, backing and running with single tree torching. The majority of fire activity was on the north and east side of the fire. Fire continues to back into the wind which is burning in black spruce and tundra. On the eastern flank of the fire, the fire was backing and running with occasional group torching. Due to poor visibility, observer was unable to accurately map the west and southwest portion of the fire. The fire remains in monitor status.

# 625	Owner: STA		Admin: L&W-Lands and Waters	
	Name: Tabert Lake		Cause: Lightning	

Acreage is an estimate as accurate mapping along the eastern and northeastern perimeter became impossible due to smoke and fire intensity. Fire behavior was rank 4 and 5 in continuous black spruce. T-264 and T-267 along with AA 35E made numerous drops along the east flank of the fire late in the burning period as fire behavior began to moderate. Later, scoopers were able to make effective drops at the head of the fire. A request has been made for scoopers to work the fire again in the morning, early in the burning period. Another mapping mission will be coordinated as well. The eastern expansion of the fire is moving it closer to trigger points for structure protection measures and the community of Lake Louise, which lies east of the fire .
