Low relative humidity and wind caused increased growth of the fire to the north and northwest. The fire intercepted the contingency line; 4 retardant tankers, 2 CL-215s, and 4 Type 2 bucket ships worked the new perimeter. Very low RH values coupled with light winds out of the south have pushed the fire to the northwest into a dry channel of Delta Creek. The fire complexity has surpassed the capacity of a Type 3 organization. In order to meet the strategic objectives of limiting fire growth to the north and avoid affecting communities and infrastructure an increase in staffing levels is planned to meet management objectives.
