Yesterday evening the fire made a significant run to the north and west driven by erratic gusty winds from a passing storm cell, but the fire still remains south of the primary containment line. Crews and heavy equipment adjusted their original plans due to these conditions. Rather than conducting firing operations on a proposed dozer line to the west of H40, dozer line was created north from H40 along natural features which then connected to the primary containment line. Firing operations continued into the late evening along this line. Additionally, firing operations were completed east from the slopover.

Today, crews and heavy machinery on the west side of the primary containment line continued firing operations from last night in order to prevent the fire from spreading north in fine fuels. They were also able to conduct direct attack operations in this area due to a change in weather conditions late in the afternoon. Crews on the east side of the primary containment line reinforced and secured sections of line in the area of last nights firing operations as well as mop-ed up the slopover from earlier in the week.

Significant acreage increase matching latest perimeter.
