The fire was flown and estimated at 3,665 acres. The fire made runs to the north and east, where continuous black spruce fuels gained alignment with wind and topography. The south end of the fire displayed less fire activity with creeping and smoldering along the perimeter. The fire continued to grow to the west on the north side of the Enstar Pipeline in continuous fuels. Plan for the next operational period is to continue to monitor and take action if necessary on the identified values at risk.

These fires are currently in monitor status. Monitoring schedules are based on defined timeframes, but are dependent on available resources, and weather conditions. When monitoring occurs, information will be updated.
