The fire remained active overnight, burning in the tundra and peat banks. Through out the day, the fire had continuous gusty winds that were fanning the fire, causing it to be resistant to control even with water on it. At 2007, the head of the fire was still active, and the peat was still proving stubborn towards suppression efforts. Plans for tomorrow consist of delivering supplies by paracargo, and if helicopter availability allows, mobilizing additional personnel into the fire to help with suppression efforts.

The fire exhibited isolated torching and creeping throughout the day. A transfer of command took place at 1700, the McGrath I.A squad was demobilized off the fire, and the White Mountain crew was mobilized. There are three areas of a concern; west and southern side due to limited natural barriers, east and southeast sides due to the peat fuels, and spotting potential from the unburned areas on the south side of the fire. The fire was called contained at 2030. The plans for tomorrow consist of securing the edge and gridding heavily on the northern side.

The fire is over 80% contained. The crew spent the day mopping up the edges and continued into the interior. There is good relative humidity recovery on the fire. A drone flight today over the fire added situational intelligence. The fire will tentatively be demobilized on Tuesday. It was predominately sunny and warm most of the day, but a strong system developed out of the north in the late afternoon that brought wind gusts to 15 mph.

The fire continues to burn actively in the both hardwoods and tundra. It is very dry in the creek bottoms and the grass remains crunchy to walk on. The Midnight Sun crew built indirect line on the east flank due to the favorable wind conditions. The smokejumpers built line on the west flank. The fire was successfully supported with the single engine airtankers and helicopters to help with containment. The next stage includes considerable mop up.
