A change in suppression tactics were implemented today in order to contain the fire to the Shovel Creek drainage after last night's observed extreme fire behavior and rapid fire spread around containment lines on the south flank. Crews continued with directly holding containment lines on the east flank and direct attack on the north flank of the fire. On the west flank, the fire has burned up to large fire scar west of the fire and rates of spread have greatly diminished in the fire scar fuel types. On the south flank, crews prepared to conduct indirect burnout operations on the ridge north and the ridge west of Murphy Dome in order to keep the fire contained in the Shovel Creek drainage. Alternate containment lines have been identified should the fire spread south and/or east of the Shovel Creek drainage.

Point protection operations continued in the Chatanika River corridor north of the fire with the focus shifting to properties on the north side of the river. Water sources and pumps for point protection were setup in the five subdivisions south and east of the fire in preparation for point protection in those areas.

Crews completed the burnout along the fire's southwestern perimeter, bringing fire both north and south along the East Fork. Crews contained fireline further north and repositioned to support holding efforts. On the southern perimeter crews mopped up and reinforced fireline from the previous day's burnout, patrolled, and gridded for spot fires. Resources initiated structure protection on additional values north of the fire. Large acreage increase due to burnout and aerial firing operations the previous evening and today.

These fires are currently in monitor status. Monitoring schedules are based on defined timeframes, but are dependent on available resources, and weather conditions. When monitoring occurs, information will be updated.
