Fire behavior today was moderated by recent rain, but fuels are recovering quickly. There was little fire growth and any spread was limited to backing and creeping surface fire in black spruce stands. Crews continued to mop-up the section of primary line west of Murphy Dome tied into the Hardluck Fire scar. East of Murphy Dome, resources improved and prepared the primary containment line with dozers and hose lays. This extends east 8 miles to the Perfect Perch subdivision and then turns north for 4 miles to the McCloud subdivision. The majority of this portion of the primary containment line consists of existing roads and established fire breaks which will only need minimal improvements. North of the McCloud subdivision, dozers and hotshot crews began establishing an indirect line to tie the primary containment line into the Chatanika River. Preparations were made for firing operation along alternate containment lines when the fuel and weather conditions allow.

In the residential subdivisions located to the south and east of Murphy Dome, point protection work continued in the residential areas immediately threatened by the fire. The majority of this prep work has been completed. Point protection work also continued on remote properties along the Chatanika River north of the fire and crews there also engaged in limited direct attack where the fire had spread close to the structure areas yesterday.
