The State of Alaska Cache System operates two primary Cache facilities: Fairbanks, which supports the Northern Region, and Palmer, which supports the Coastal Region. Additional Area Caches are located in Delta, Tok, Kenai, Copper River, and McGrath. Area Caches are intended for use during the Initial Attack phase of an incident, and all items must be checked out using the appropriate documentation for tracking purposes. Extended Attack incidents should order exclusively through their designated Regional Cache.

### *Ordering*

- Complex Incident Management Teams should order directly through the Regional Cache using the Resource Order Spreadsheet.
- Initial Attack, Type 3 and other Incidents should order through their respective dispatch centers, who will then forward the order to the Regional Cache.

### *Delivery*

- Each Complex Incident should coordinate with their Regional Cache to establish a designated daily ordering time.
- Incidents must have personnel and appropriate equipment (including a forklift if needed) present at the designated delivery location to receive shipments. Incidents are also expected to assist with loading and unloading all equipment and supplies.

### *Accountability*

- Upon delivery, inventory all items and document any discrepancies on the shipping document. Notify the Regional Cache to resolve any issues or discrepancies.
- Incident summary reports can be requested from the Regional Cache to help maintain accountability of equipment and supplies.

### *Demobilization*

- Unneeded equipment and supplies may be backhauled throughout the incident
- Whenever possible, items should be properly boxed, palletized and secured with stretch wrap prior to backhaul.
- All equipment and supplies containing fuel **MUST** be purged and vented before being returned (e.g., saws, tanks, generators, dolmars, driptorches, etc.)
- For Hazmat backhaul refer to the Hazmat section on page 48
- For backhaul of Hazmat on aircraft reference PMS 513 <https://www.nwcg.gov/publications/pms513>
- Regional Cache staff may occasionally be available to assist with backhaul preparations; contact the Regional Cache in advance to confirm availability.
- Incidents should coordinate backhaul truck scheduling directly with the Regional Cache.

# FRESH FOOD ORDERING

24 Hour lead time is REQUIRED on all Fresh Food orders.

It is only appropriate to order Fresh Food if the incident last 6 or more days.

## Ordering Food:

Fresh food boxes may be used as an alternative to MREs. There are situations where MREs are not suitable and alternative feeding methods should be considered.

**Fresh Food Box A feeds 2 people for 3 days** See the following pages for contents.

**Fresh Food Box B feeds 4 people for 3 days** See the following pages for contents.

Keep the entire incident on the same 3-day fresh food cycle for logistical purposes. Staff arriving mid-cycle may be supplied with MREs.

If Fresh Food order is delayed due to weather or logistical issues DO NOT RE-ORDER

Avoid splitting food boxes. Enough should be ordered to limit division of boxes between cohesive units. Example: For three crews (20, 19, and 19 people), order 10 Box A's per crew, without splitting or shorting crews.

For overhead, order by specific eating area. Incident Command Post (remember bus drivers, boat operators, etc.)

Helibase (remember pilots, fuelers, etc.) and Spike Camps.

When assessing whether to order box A or B, consider the goal is to have adequate food for all personnel without accumulating too much.

Other considerations include the incident's ability to distribute large deliveries of fresh food because of staffing levels or transportation resources.

## Camp Kitchen:

Ensure cooking equipment such as pots, pans, utensils, are on hand ahead of the fresh-food delivery. The State of Alaska has a Camp Food Preparation kit that includes these items.

Open fires are generally an acceptable method of cooking food. When firewood is limited or fire risk is high, use cook stoves and white gas.

Maintain safe storage temperatures to not expose personnel to the health risks of spoiled food. Ice chests and ice delivery may need to be considered if there is limited permafrost for refrigeration.

Each crew will typically establish a kitchen at their camp. While generally not a problem, these camps should remain clean and have proper storage to prevent attracting bears. For overhead, it is recommended to have one large cooking/eating area.

## Demob:

When demob is near, reduce fresh food orders accordingly.

Remaining food items may be donated to a local food bank if available.

Maintain proper storage temperatures to ensure food remains safe and useable for donation.

# HAZARDOUS MATERIALS

## IT IS AGAINST THE LAW TO NOT DECLARE OR NOTIFY A CARRIER OF HAZARDOUS MATERIALS YOU ARE SHIPPING

Hazardous materials shipping documentation is REQUIRED. The pilot must be notified of all hazardous items. The responsibility for preparing the documentation rests on the Shipper (YOU).

Please refer to the following pages for quick reference guides, examples and blank forms.

You will need 3 copies of your document:

1<sup>st</sup>- Accompanies shipment

2<sup>nd</sup>- For Carrier

3<sup>rd</sup>- For your records

The local Cache personnel are a resource on shipping requirements. When in doubt call the Regional Cache or the State Cache Manager.

### **Some of the commonly encountered hazardous materials are:**

Aerial ignition Devices (Ping-Pong balls), fuels, lithium batteries, un-purged gas engines with attached fuel tanks (i.e., generators, chainsaws, or Light weight pumps), propane, fuses, used fuel hoses, cans and fuel bladders)

### **Please follow the rules listed below:**

Purge all equipment and run dry if possible.

ALWAYS ship fuel cans with the manufacturer's bungs, NEVER with a valve drum faucet or other spout.

Remove ALL fuel cans from the green packsack and ship in original box or loose.

Consolidate like HAZMAT items. If possible, box together and label according.

NEVER ship a MK III fuel tank "Jerry can" with fuel.

ALWAYS separate an oxidizer from a material that produces a chemical reaction or flammable material (i.e. anti-freeze and ping pong balls – ping pong balls and fuses)

Air Transport Segregation - Separate compartments or flights.

Ground Transport Segregation - Packaged on separate pallets.

ALWAYS ship Bear Spray in an IATA approved cannister, following the directions and INFORM the pilot.

\*Failure to comply may result in loss of DOT SP 9198\*
