Narrative from 6/4/2026: At 1400 the fire was discovered by satellite heat sensing. At initial discovery, it plotted 2 miles west of Ambler, AK. Fire is located in a modified fire response option, and it was determined that 1 load of smokejumpers would respond. Observed fire behavior included a 90-100% active fire perimeter with running and torching in tundra and black spruce. Once J-90 was on scene, fire personnel ordered another load of smokejumpers (J-92), 2 single engine scooping water aircraft, air attack OGG, 2 heavy airtankers, and helicopter 4PA. At 2300 all aerial resources departed, and smokejumpers stayed on scene to work on containment.
