The fire is reported to be 1200 acres, 100% active, burning in dead and down timber, and black spruce. The fire is burning at a moderate rate to the north and northeast. Smokejumpers removed fuels from the right flank. Aerial supervision conducted aircraft operations on scene, assessed values at risk, and fire behavior. Heavy Air Tankers were used on the north, northeastern head of the fire to reduce fire spread to the north. Helicopter 279CH conducted recon missions. Helicopter 377PA conducted bucket work on the incident. For the next operational shift IC plans to reassess structures in the area and begin structure protection and burn out operations.

Hot and dry weather occurred over the incident today, fire behavior was active with group torching in green interior islands. Pioneer Peak, Midnight Suns, Gannett Glacier and a helitack module from the local unit constructed sawline and placed a hose lay around most of the perimeter of the fire and bucket drops were used to keep the fire checked in place. Midnight Suns were taken off the line in the early afternoon and demobilized for a higher priority fire. The increase in acreage is due to more accurate mapping. A Type 3 organization remains in command of the incident.

These fires are currently in monitor status. Monitoring schedules are based on defined timeframes, but are dependent on available resources, and weather conditions. When monitoring occurs, information will be updated.
