During a reconnaissance flight on fire 914611, the fire was discovered and initially considered to be a spot fire from Tokiana 2. Closer observation showed deep burning conditions and root-burned downed timber indicating a long period of smoldering. Adjacent fire's proximity thereto and winds have not necessarily been favorable to provide for long range spotting. The fire is more likely a lightning holdover from July.

Crews continue with full containment strategy by securing control lines, utilizing natural barriers where possible and mopping up to reduce potential for flare ups and spotting.

Predicted Weather: High pressure will provide overall dry conditions and above average temperatures through Friday. Light and terrain driven flows will prevail across the incident with light and variable smoke transport. Afternoon cumulus development is possible Friday afternoon with a slight chance for an isolated shower.

Increased perimeter and interior containment has reduced the potential for fire spread. Extremely dry duff has burned away leaving large ash pits and very unstable trees in the fire area. The ash pits are impeding mop up operations due to their depth and the hazard they pose to firefighting personnel. The unstable trees also are impeding mop-up operations and pose a hazard to firefighting personnel. Trees, green and fire-weakened, are falling without significant wind creating jackpots of fuel. The jackpots are falling on hot ash and flare up torching out nearby trees. This torching supplies embers for potential spots outside of existing fire line and could threaten structures that have been saved during initial firefighting efforts. Resources will continue to pursue containment of the incident and protect values at risk. Even though fire progression has ceased, control of the fire will take extensive mop up and water from crews and equipment. Current staffing in the Divisions will continue. Predicated weather forecasts currently show no signs of normal climatological conditions to the area, instead predicting continued dry atmospheric conditions. Crews will continue to work with the Matanuska Electric Association working within the utility corridor reducing hazards in order to restore power to the remaining properties. The Incident Management Team will also be focusing efforts on making the access and area safer for firefighters working in the area and the residents who have returned to the area.

The north half of Division A & Z (H-30 to H-10 for A and Gannett Spike to H-10 for Z) remains in patrol status. The remainder of Div Z will be gridding or mopping up. Most of Div A will also be gridding and mopping up, with the exception of the spots down near H-70. The eastern spot has line around it and mop up operations have begun and will continue. Line construction will continue on the western spot. IR Flight last night showed one unknown heat signature outside the line. Crews located the area and an unknown spot did exist. This area was small and crews dug out and extinguished the heat.

Given the heat out there and the snags that keep falling, progress reported yesterday was reduced slight today.

H-6094E flew a reconnaissance mission and delivered fresh food to personnel monitoring the fire. It was determined a nonstandard response is appropriate to protect values at risk. The fire has progressed beyond trigger points previously in place for implementing aggressive defensive tactics. The fire remains active on all flanks and consistently displays Rank 2 & 3 behavior. Short Rank 4 runs are a common occurrence where pockets of fuel and wind align, and are expected as the SE flank wraps around the south cabin on High Lake. A TFR was put in place over the area.

Fire personnel continued to put a saw line around the allotment boundaries. H-990SL completed a reconnaissance of the fire and reported the fire was burning in tundra with areas of torching in heavy fuels, with light winds out of the north. Fire personnel plan to complete operations on the allotment and then to start operations on the allotment to the northwest. Incident Commander ordered more supplies to help with allotment protection.

A load of jumpers was requested for allotment protection. J-07 responded deploying 6 smoke jumpers. The fire was 20% active, burning ¼ of a mile from the allotment edge in tundra and black spruce. The fire was creeping and backing, with occasional torching. Firebosses and air attack were dispatched to assist in holding the fire on the creek to the north of the allotment. Jumpers worked to establish the corners and assess work for completing a saw line and hose lay. Fuels are thin on the southwest corner and personnel foresee the possibility of using aerial resources to reinforce the line as well as hose and pumps to knock down the remaining heat.

Continue securing fire lines along the southwest and southeast portions of the fire to stop spread to the west toward Sterling and the east toward Cooper Landing. Hand crews resumed constructing and securing fire lines south of the Kenai River into the Kenai Wilderness Area near Cooper Landing. Crews will assess options for fire containment in Resurrection Canyon as opportunities arise. Resources continued constructing and holding line along Fuller Lake trail to control spread to the southeast towards Cooper Landing. Structure group worked with local resources and dozers to complete contingency lines and other structure protection actions within and adjacent to Cooper Landing. Resources continue to assist Homer Electric employees conducting damage assessments.

Predicted Weather: 24-48hr; High pressure will provide overall dry conditions and above average temperatures through Friday. Light and terrain driven flows will prevail across the incident with light and variable smoke transport. Afternoon cumulus development is possible Friday afternoon with a slight chance for an isolated shower.

These fires are currently in monitor status. Monitoring schedules are based on defined timeframes, but are dependent on available resources, and weather conditions. When monitoring occurs, information will be updated.

The fire was observed to be 60% active with Rank 2 and Rank 3 behavior on the west and north flanks. Considerable growth to the north was noted on steep south-facing slopes. This fire is expected to merge with Tokaina Creek if continued dry conditions persist. The fire does not pose an immediate threat to the north cabin on High Lake.

These fires are currently in monitor status. Monitoring schedules are based on defined timeframes, but are dependent on available resources, and weather conditions. When monitoring occurs, information will be updated.

The fire was discovered to have made a significant northerly run across a subalpine bowl and has crested the next ridge to the north. Progression to the north was observed to be an organized Rank 3 downslope backing front with 12" flame lengths in high-country dwarf birch and willow. No values at risk are immediately threatened. Growth is expected to continue as dry conditions persist.
