Although fire activity has decreased due to moving into an area burned by a previous fire, increased humidity and precipitation, the eastern edge of the fire continues to have long-term potential for spread if fuels dry later in the season. Hotspotting and monitoring strategy continued to be implemented. Crews will continue direct, hot-spotting tactics on the eastern edge. Crews continue wildland fire suppression rehabilitation work.

These fires are currently in monitor status. Monitoring schedules are based on defined timeframes, but are dependent on available resources, and weather conditions. When monitoring occurs, information will be updated.
