## Alaska Fire Season 2007

The 2007 Alaska fire season began in mid-April, with numbers of fires and acreage burned through May slightly above the five year average. By the end of June there had been approximately the same number of fires reported, in comparison to the five year average, but less than a quarter of the average acreage burned.

A significant number of lightning fires in July brought the fire total to 485, just above the five year average of 457, but total acreage still remained less. The number of fires for the remainder of the year was less than half the five year average figure, with 24 additional fires occurring from August through November. The acreage burned for that timeframe, 1,688 acres, was significantly less than the five year average acreage.

There were 260 fires caused by lightning that burned 556,950.6 acres, the majority of which were in limited protection. 15,972.1 acres burned in full protection areas, including the Su River fire which remained active from June 20 through August 20 becoming one of the season's large fires.

The majority of reported fires were in the northern half of the state. The Upper Yukon Zone reported 118, the Tanana Zone 69, the Galena Zone 60, Delta Area Forestry 31, and Fairbanks Area Forestry managed 72 fires. Most of the fires in the southern part of the state occurred in the Division of Forestry's Mat-Su Area, with 97, and the Kenai Kodiak Area, reporting 31.

### Alaska Large Fire Summary

**Big Creek (#420)** was discovered July 5 on a detection flight for the Tanana Zone. The fire was 50% active, burning in black spruce, and 100 acres. The fire was initial attacked with two loads of Smokejumpers, Air Attack, and an Airtanker that dropped six loads. The most significant growth made by this fire occurred within the first 24 hours. On July 6 the fire was 3,000 acres, torching, spotting, and running. One Type 1 Crew and three Type 3 Crews arrived to assist with the current ground and air operations. Extreme fire behavior was observed for three days, and then resources began containing the fire at about 3,500 acres. The fire was completely demobilized on July 22, and it was called out on September 28 at 3,416.9 acres. Staffing of this fire was limited to a Type 3 organization.

**Boney Creek (#416)** was reported on July 5. It was 10 miles southwest of Tanana, 5 acres and 100% active. No Initial Attack resources were available at the time of report. By the next morning, CL-215s and Smokejumpers were available, and the fire had grown to 700 acres. One Type 1 and four Type 2 Crews were brought in to staff the fire. This lightning fire was demobed July 17 and was monitored intermittently by air until September 28 when it was called out at 780 acres.

**Caribou Hills (#278)** was called in June 19 by an area local and reported to be 'a large amount of white smoke' one mile south-southeast of her home. Helitack responded, Airtankers dropped retardant, and Dozers built line. By the end of the first shift, the fire had grown to 1,000 acres and had destroyed one structure. Heavy beetle kill, dense grass, and steep terrain hampered suppression efforts. Jandt's Type 2 Team assumed command of the fire the morning of July 21, and by the end of shift the fire had consumed 20,000 acres (the largest growth in one shift at 15,000 acres). 1,603 structures were threatened and 110 were destroyed throughout the course of the fire. The total number of personnel peaked at 626 on June 27. On July 3, transition to a Type 3 organization took place, and the fire was considered 80% contained. All personnel were demobilized on July 6, and the fire was monitored by National Park Service personnel until it was called out October 31 at 56,254 acres.

**Franklin (#392)** was discovered at 5 acres, and was threatening to spread toward allotments and the Iditarod trail. Airtankers dropping eight loads of retardant and 16 Smokejumpers were utilized as Initial Attack. By the second shift, the fire was 30% contained and activity had moderated with no problems anticipated. It was 100% contained July 7, and completely demobilized on July 10. The fire was declared out on August 9 having been closely monitored by air. The final size of this lightning fire was 183 acres.

**Mooseheart (#164)** was reported as 2 acres in black spruce and hardwoods on May 23. Although the fire plotted in limited, it was within 2 miles of full protection. An Airtanker, Air Attack, and Smokejumpers responded due to the fire's proximity to structures and allotments. Extreme fire behavior drove firefighters off the line, and by the close of the first shift the fire had grown to 400 acres. Over the course of the next five days, the fire grew thousands of acres, eventually reaching a final size of 21,508 acres. A Type 3 organization was in place for 20 shifts. After continued monitoring of this lightning fire, it was declared out on September 28.

**Su River (#301)** was reported as a lightning fire to Forestry Dispatch on June 20. Duty day limitations for pilots prevented attack by air until the following morning, but ground units were staged overnight for structure protection and reported the fire was 100% active, running, crowning, and spotting in black spruce and mixed hardwoods. The Trapper Lake area was evacuated. At the close of shift, the fire had reached 6,000 acres (from 250 the first night). Goheen's Type 2 Team (Oregon) assumed command of the fire the evening of June 24. The fire was 100% contained by June 29 and demob of personnel and backhaul began. The Type 2 Team transitioned with a Type 3 organization, and the fire was monitored until August 20 when it was called out at 8,494 acres.

**Wild (#443)**, a lightning caused fire was detected nine miles north of Bettles on July 8. It was 100% active and 50 acres, being pushed by an east wind at 10-12 mph, with a 150-200 yard wide front. Resources were unavailable for initial attack. July 11, the morning of the fourth day, Smokejumpers were mobilized to the fire and requested Air Attack and CL-215s to respond. The fire quickly grew from 60 to 2,120 acres, and erratic fire behavior forced suppression efforts to be suspended. The efforts of ground personnel aided by significant amounts of precipitation were successful in reducing the fire's activity and halting its growth. The fire was completely demobed on July 17, and called out August 17.

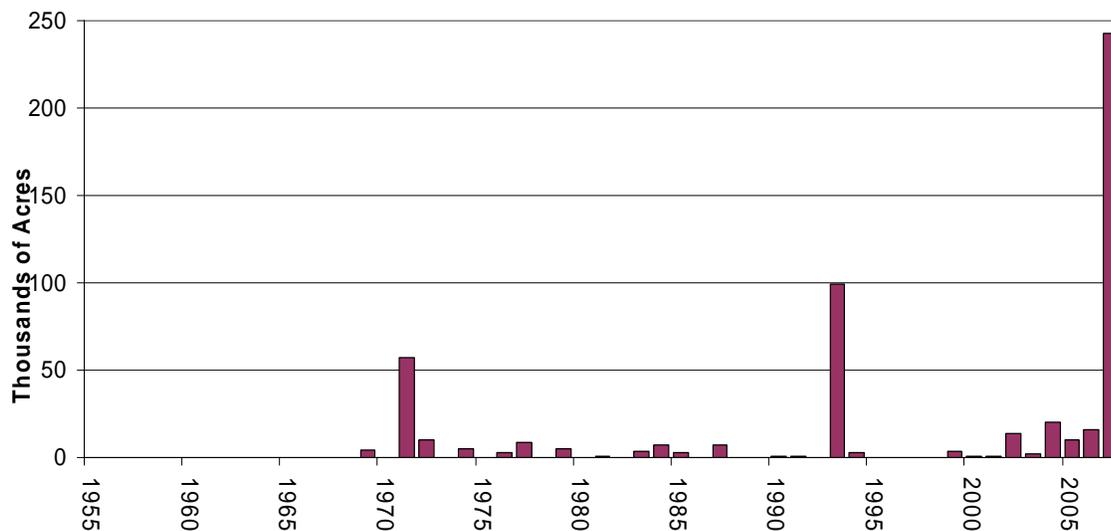

**Anaktuvuk River (#509)**, one of very few large Alaskan fires recorded in the last fifty years north of 68 degrees latitude, was reported through Barrow Flight Service on July 16. The tundra fire, in limited protection, burned along the east side of the Anaktuvuk River, and reached just over 9,000 acres by early August. In mid September the fire made a large run to the north and the acreage increased to over 200,000 acres. On October 9 the fire was called out at 256,734 acres which surpassed all previously recorded acreage for fires north of 68 degrees latitude, combined, since 1956.

## Conclusion

Although the season was not exceptional, in relation to the 10-year average, 2007 ranked 6<sup>th</sup> for number of acres and 4<sup>th</sup> for number of fires, and there were several points of interest.

The Anaktuvuk River fire, one of 138 fires reported north of 68 degrees latitude, burned from July into October and accounted for 39.6 % of the statewide acreage total. This fire had significant acreage gains in September; gaining 112,526 acres on September 9<sup>th</sup>, 40,346 acres the 13<sup>th</sup>, and gaining 21,512 on the 24<sup>th</sup>.

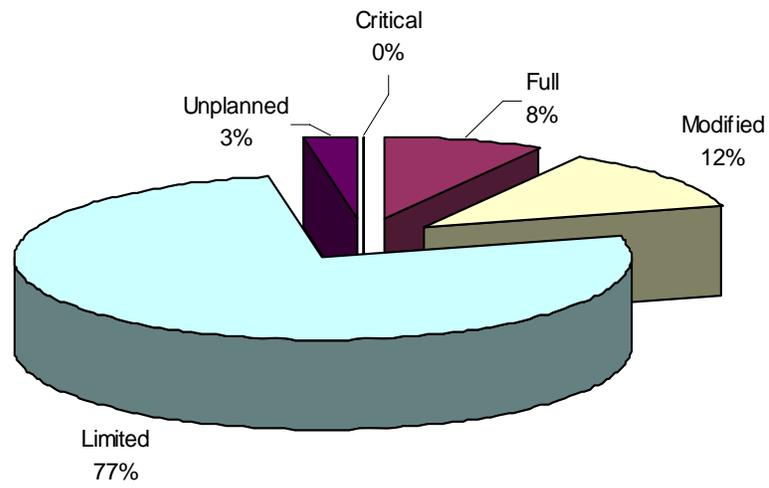

**Total Tundra Fire Area (Acres) Burned North of 68 deg. North Lat 1956-2007\***

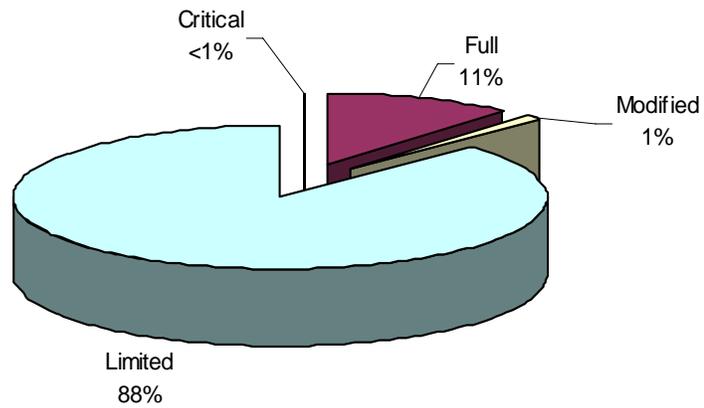

Ten State wildland fire engines, staffed with DOF personnel, were mobilized to the lower 48 for the first time. The engines went to Montana in July and returned in mid-September after being on assignment over 50 days.

Several Northwest Compact Resources were used from Canada throughout the season including: 2 Convair 580 Airtankers, 1 Birddog Lead Plane, 1 Helicopter with a Rappel Crew from British Columbia, and 2 CL-215s from the Northwest Territories. In addition, 10 Type 1 Crews, 40 Smokejumpers, 256 Overhead (including 1 Type 2 Incident Management Team), 3 Medium Helicopters, and 1 Large Airtanker were mobilized to Alaska from the Lower 48.

Number of fires is based on ownership and management option at point of origin. Acreage shown is actual acres burned by owner and Management option, i.e. fires that burned on multiple ownerships are counted as fires based on the ownership at point of origin, but the acreage burned is divided and shown based on the owner where the acres burned.

# Fire Weather 2007

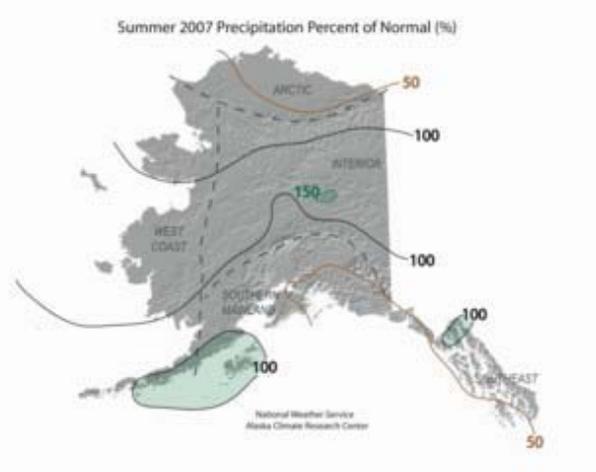

*Acres burned per year with running 5 year average.*

With almost 650,000 acres burned, 2007 was well under the average but closer to normal than the past three extreme high or low years. Looking at the above graph, you can see that most years we burn less than 500,000 Acres.

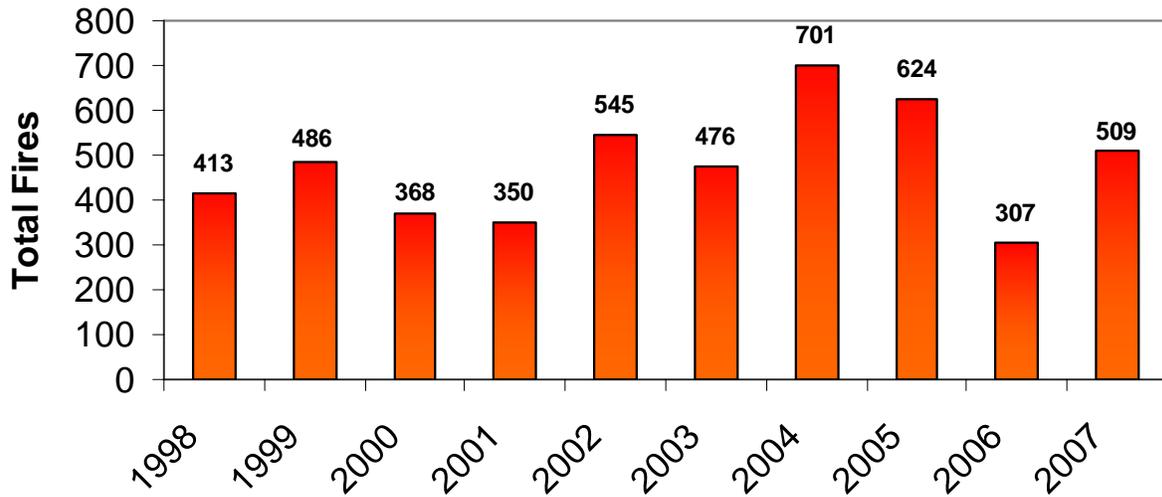

The Kenai had an atypical summer in that, due to a persistent low in the Gulf of Alaska, weather was cool with high relative humidity. However because of the prevailing east to southeast winds aloft, the western Kenai saw little measurable precipitation through the summer. This led to long term drying and a persistence in the fires burning on the Kenai, particularly in a drier than normal August south of the Alaska Range.

The summer of 2007 was of note in the interior as one of the “nicest” in memory. This was due to the absence of large scale weather systems that normally pass through Alaska once or twice in the summertime bringing cooler and wet weather for up to a week. There was also much more consistent lightning across the state for the same reason but with plenty of moisture. So even with the widespread and frequent lightning extremely large fires did not occur.

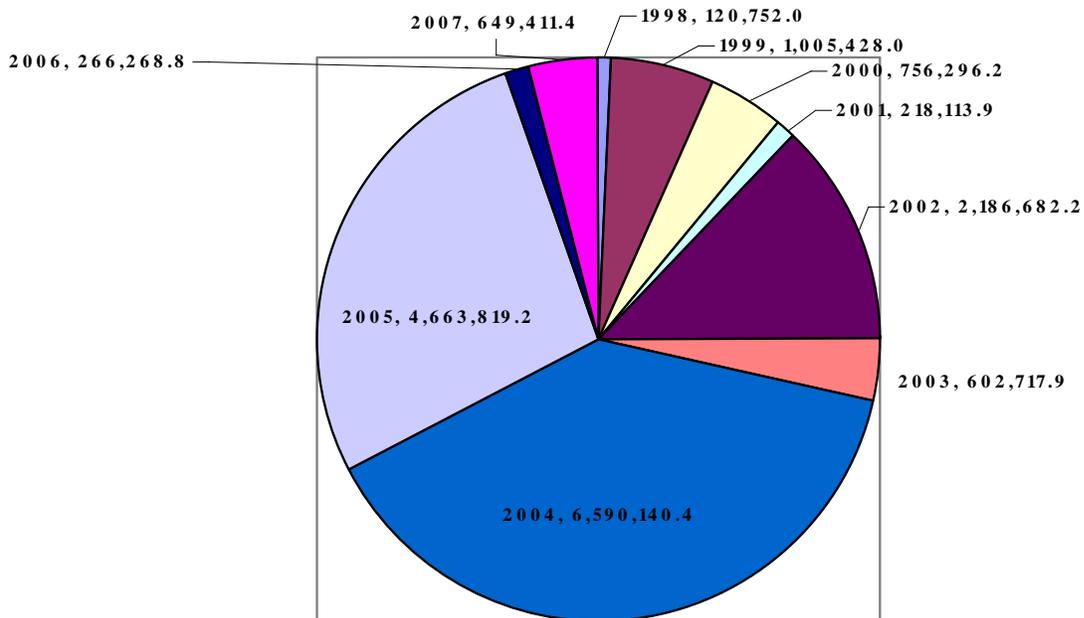

## 10 yr Statewide Number of Fires

10 year average:      **Fires   Acres**  
                                  **478   1,705,963**
