

## 2026 AK Special Management Area (SMA) Attribute Fields & Definitions:

**Consideration Type:** Broad classification of fire management considerations. Select one. Domain options: “Limit Fire”, “Benefit from Fire”, and “Neutral to Fire”.

- 1) Limit Fire: The Management Considerations would include language suggesting the value or resource could be negatively impacted by fire.
- 2) Benefit from Fire: The Management Considerations would include language suggesting the value or resource could benefit from fire.
- 3) Neutral to Fire: The Management Considerations would include language where the value or resource concern is related to firefighter and/or public safety, impacts from suppression actions or other factors not directly related to the presence or absence of wildfire.

**Feature Type:** Broad category of what the polygon primarily represents. Select one. If the feature represents more than one category, select the primary “type” from the list below and use the “Management Considerations” to describe secondary feature types. Domain options:

- Safety Concern
- Infrastructure/Natural/Cultural Concern
- Threat of Fire to Values
- Social/Economic Concern
- Other Resource Concern
- Minimum Impact Suppression Tactic

**Name:** (100 Character Maximum) The short description/name of the polygon feature.

**Management Considerations:** (2000 Character Maximum) The Management Considerations associated with the polygon record. Summarize the fire management considerations associated with this area and provide any additional relevant descriptive information. Avoid prescriptive language unless that has been agreed to in a documented process such as a Management Option change and referenced as such. A request for contact may be included but avoid over-specificity that is subject to frequent change.

**Submitted By:** Unit ID of the agency or entity submitting the record.

**Verified By:** Name/Title/Agency/Unit ID of last verifier.

**Verified Date:** Date that record was last verified.

**Delete this feature?:** For field use. Recommend record for deletion and describe rationale.

**GlobalID:** System generated GlobalID.

**CreationDate:** System generated date for the date time the polygon record was created (stored in UTC).

**Creator:** System captured username of polygon record creator.

**EditDate:** System generated date for the date time the polygon record was last edited (stored in UTC).

**Editor:** System captured username of the last polygon record editor.
