Drying winds and lower RH values will allow more fuel to be available for consumption with noticeable fire behavior increase in the short term. The short duration warming trend is expected to increase the potential fire behavior. Continued smoldering and creeping in the fire area is expected with the potential for black spruce to become available for more active fire behavior.

These fires are currently in monitor status. Monitoring schedules are based on defined timeframes, but are dependent on available resources, and weather conditions. When monitoring occurs, information will be updated.
