5AE reconnoitered the fire, and was observed as having minimal activity. The main active edges of heat were located on the bottom of the slope and upper edge approximately 200 to 300 ft from the ridgeline. No significant growth was observed. 1 to 2 ft long flame lengths were observed with winds of 10 to 12 mph out of the west. There was little concern of escapement on the north side as there is good snow cover. The fire appears to be burning in an old burn scar.
